EDUCATION

Northeastern University	2016 – 2018
Master of Science in Computer Science	GPA: 3.7
Relevant Courses: Web-Development, Algorithm, Program-Paradigm-Design, Information-Retrieval	
Dharmsinh Desai University	2011 – 2015
Bachelor of Technology in Computer Engineering	GPA: 8.2
Relevant Courses: Data-Mining, Database-Management, Service-Oriented-Architecture, Software-Engineering, Artificial-Intelligence, Data-Structure-and-Algorithm, Web-Development-in-.NET	

TECHNICAL KNOWLEDGE

Languages:	python, java
Web Technologies:	
Software:	
Software:	

WORK EXPERIENCE

Philips, Boston, MA	08/2015 – 02/2016
Software Developer COOP	
<ul style="list-style-type: none">Analyzed historic data for NRHL from various cloud storage such as Loggly, New Relic, available APIs and Database storage (ElasticSearch and ElasticSearch APIs)Generated trend analysis for past events using various environment for statistical computing and graphicsTranslated business needs into actionable modeling strategy and data mining goalsImplemented various machine learning algorithms using Scala on Apache Spark platform, R programming language for initial mock data, various submodules in python with complete automation process using Jenkins, Docker and Ansible 2.0	
ESSAR POWER, Hazira, India	08/2015 – 02/2016
Software Engineer Intern	
<ul style="list-style-type: none">Developed and Designed a Transmission Tower Management System for EPTCL (ESSAR POWER TRANSMISSION COMPANY LIMITED) using technologies C#, ASP.NET, SAP Crystal Reports, Google Maps API, Microsoft SQL Database and Open XML SDK which manages data for technical, legal, land ownership and maintenance details.Implemented features to export reports to EXCEL, update data through EXCEL, view Tower Location in Google Maps and notify users through email for any updates or insertion in modules.Corresponded with clients to gather the requirements and an overview of the functionalities for the application.	

PROJECT

Search Engine Implementation (NLKT Python)

- Developed an indexer to store the token of 3000 Documents.
- Implemented BM25, cosine and tf-idf similarity model to extract top 100 documents for a query.
- Expanded the Query Using Pseudo Relevance Model and obtained 20% better search results.
- Implemented MAP, MRR, precision-k and recall-k measures to evaluate given document-rank file of a different IR model and created Precision/Recall curves for visualization.

Web Crawler (Python Beautiful Soup)

- Designed and implemented a web crawler to perform focused and un-focused crawling for the given seed page and a depth level using Python and Beautiful Soup.

Music Listening Application (C# SQL)

- Developed a Web application based on MVC Architecture where the admins can add genre, albums and songs whereas users can listen to these songs by searching by their genre, album or name using C# and SQL.
- Users can also view the popularity of the songs based on genre and albums.

Road Trip Planer (Python Json Android Google Maps API)

- Developed a Mobile application by using Android programming and integrating Python, JSON, Google Maps and Geocoding API which recommends different routes based on the vicinity of the traveler's current location for the Road trip and the relevant places the traveler can visit during the trip.
