EDUCATION

Northeastern University	2016 – 2018
Master of Science in Computer Science	GPA: 3.7
Relevant Courses: Web-Development, Algorithm, Program-Paradigm-Design, Information-Retrieval	
Dharmsinh Desai University	2011 – 2015
Bachelor of Technology in Computer Engineering	GPA: 8.2
Relevant Courses: Data-Mining, Database-Management, Service-Oriented-Architecture, Software-Engineering, Artificial-Intelligence, Data-Structure-and-Algorithm, Web-Development-in-.NET	

TECHNICAL KNOWLEDGE

Languages:	python, java
Web Technologies:	
Software:	
Software:	

WORK EXPERIENCE

Philips, Boston, MA	08/2015 – 02/2016
Software Developer COOP	
<ul style="list-style-type: none">Analyzed historic data for NRHL from various cloud storage such as Loggly, New Relic, available APIs and Database storage (ElasticSearch and ElasticSearch APIs)Generated trend analysis for past events using various environment for statistical computing and graphicsTranslated business needs into actionable modeling strategy and data mining goalsImplemented various machine learning algorithms using Scala on Apache Spark platform, R programming language for initial mock data, various submodules in python with complete automation process using Jenkins, Docker and Ansible 2.0	
ESSAR POWER, Hazira, India	08/2015 – 02/2016
Software Engineer Intern	
<ul style="list-style-type: none">Developed and Designed a Transmission Tower Management System for EPTCL (ESSAR POWER TRANSMISSION COMPANY LIMITED) using technologies C#, ASP.NET, SAP Crystal Reports, Google Maps API, Microsoft SQL Database and Open XML SDK which manages data for technical, legal, land ownership and maintenance details.Implemented features to export reports to EXCEL, update data through EXCEL, view Tower Location in Google Maps and notify users through email for any updates or insertion in modules.Corresponded with clients to gather the requirements and an overview of the functionalities for the application.	

PROJECT

Social Media Application for Photos (PHP JavaScript MySQL)

- Designed and developed a website which includes features like photo-editing, commenting, liking the photo as well as photo-sharing using PHP, JavaScript and MySQL.

Search Engine Implementation (NLKT Python)

- Developed an indexer to store the token of 3000 Documents.
- Implemented BM25, cosine and tf-idf similarity model to extract top 100 documents for a query.
- Expanded the Query Using Pseudo Relevance Model and obtained 20% better search results.
- Implemented MAP, MRR, precision-k and recall-k measures to evaluate given document-rank file of a different IR model and created Precision/Recall curves for visualization.

Web Crawler (Python Beautiful Soup)

- Designed and implemented a web crawler to perform focused and un-focused crawling for the given seed page and a depth level using Python and Beautiful Soup.

Movie Rater (Java POS-Tagger Senti-word SQL)

- Researched seven papers to develop the website which rates the movies based on the comments given by the users using Unsupervised Feature Based Sentimental Analysis using JAVA, Pos-Tagger, Senti-Word and SQL.
